Instruction Sheet for Cable Prep® Brand CC-8002

The CC-8002 is used by CATV installers on coaxial cable all over the world. This tool is both lightweight and compact to fit into a tool pouch. The under cut design eliminate cable distortion during cable cutting and can be used on all sizes of coaxial cable up to 1”.

To operate, open handles and place open jaws over the cable to be cut. While applying close pressure, swing the tool back and forth to cut the entire circumference of the cable. This technique produces the least amount of cable distortion and ensures that your jacket stripper and coring tool will work correctly on the cable.

Easy-open handles and the ability to adjust tension ensure precise cuts with minimal effort.

DO NOT USE TO CUT STEEL CABLE

Cuts cleanly without distortion
